VIMOND | /O

January 2021

Vimond IO is a next generation non-linear editing and publishing platform, built from the ground up to meet the modern "content everywhere" demands of post production.

A cloud native, browser based, SaaS product. Vimond IO has been built with a modern software architecture using the latest microservice design principles providing: high availability, 24/7 monitoring and continuous development.

Vimond IO provides customers with access to a lightning fast video editor. Offering a streamlined and professional grade Source/Timeline view to construct stories ranging from complex sequences enriched with graphics, audio, and images to simple clips from files or live streams suitable for Social Media and digital platforms.

With the fastest rendering service on the market, Vimond IO ensures your content makes the first impression and engages your audience.

Vimond IO NLE: Non-Linear Evolution
Vimond IO is a unique value proposition that combines media workflows that traditionally require significant investment, in one streamlined and cost effective solution.

- REMI: Browser based with Remote Integration workflows in mind, work from any location
- Live Inputs: Live content can be used directly in the editing tool, with no limits on input capacity
- Cloud Native: Not "virtualised", with high cost & capacity limitations. IO is built for the cloud
- Networked Storage: A high performance Storage Attached Network as part of its infrastructure
- Collaboration: Share projects, work simultaneously, shared content instantly from live and file uploads
- Multi-platform: Use the same tool to produce content for social media, online or linear

The software is accessed with a web browser, available to anyone with an account and a computer with a 5 Mbps internet connection. Unlike traditional editors, Vimond IO requires no on premise hardware or software. It is built to allow users to create one story, and publish in multiple formats to many destinations.

The toolset provides the ability to quickly clip, edit, and publish content using a professional and highly responsive UI. When publishing, you can transcode to a wide range of bitrates and aspect ratios simultaneously and publish your desired output to social media platforms or back to your own MAM or CMS with one click publishing.

Ingest
- Ingest video and audio from live streams and file-based footage
- Supports multiple media formats

Edit
- Collaborative Editing
- A familiar source, sequence, and timeline layout from both live and archived footage
- Upload still images and re-frame for multiple aspect ratios
- Closed-caption search and metadata management capabilities
- Add music, effects and record voiceovers directly to the timeline
- Import Adobe After Effects graphics templates

Publish
- Output multiple versions of published video with different bitrates and/or aspect ratios
- Integrated and self-provisioned support for publishing to AWS S3, YouTube, Twitter, and Facebook. Users can also download video and publish anywhere.

Easy integration with your infrastructure
Vimond IO functions more as a platform than a single instance software application, with tools built to a quality that media outlets are reliant on. The tool is flexible with an open architecture design which enables integration with other applications and services. This enables you to adopt additional cloud platform services to suit your specific needs
